

Croxx

Double Protection

“Ready-to-use” solution for stabilization of Slurry and Digestates. The perfect combination of two established technologies: Nitrification Inhibitor and P-Booster.

Adding DMPP to Slurry and Digestates delays the conversion of ammonium to nitrate significantly. The NH_4^+ remains stable and available to plants avoiding leaching and gaseous losses.

Additionally, P-Booster shelters the Phosphate like a protective shield from reacting with Calcium, Aluminum, or Iron. Subsequently, Phosphate from Slurry remains available for the plant, regardless of soil pH.

Content (% w/w)

27.0 P-Booster

3.7 DMPP

Bulk density (kg/l): 1.05 / pH: 3.0

Double Protection

Benefits

- ✓ Longer NH_4 in the soil
- ✓ Active ingredient 3.4 DMPP
- ✓ Less N losses though leaching (NO_3^-) and volatilization (N_2O)
- ✓ Higher efficiency of all Phosphate Fertilizers
- ✓ Reduced Phosphate precipitation by Ca, Fe or Al
- ✓ Enhanced Uptake of Trace Elements

Packaging: 20l / 200l/ 1000l
