

CroxX

N2 stabil

“Ready-to-apply” two in one solution for solid / liquid fertilizers to stabilize Ureic Nitrogen, combining urease inhibitor (NBPT) and nitrification inhibitor (DMP).

Urease and nitrification inhibitor work together, by inhibiting the urease enzyme and Nitrosomonas bacteria. This synergistically delays the conversion of urea to ammonium as well as nitrate, while minimizing volatilization (NH_3 / N_2O) as well as nitrate (NO_3^-) leaching. By reducing losses CroxX, N2 stabil will maximize nitrogen use efficiency and make the most profit out of your urea fertilizer.

Content (% w/w)

25 NBPT / 7.5 DMP (3,4-dimethyl-1H-pyrazole)
Various colors and branding available.

Bulk density (kg/l): 1.12
CE certified

N2 stabil

Benefits

- ✓ Double Technology in one solution (NBPT/DMP)
- ✓ Protected Nitrogen against volatilization and leaching losses
- ✓ More N for the plant
- ✓ Safe handling
- ✓ Simple application in fertilizer mixing systems to urea
- ✓ Easy addition to liquid UAN possible

Packaging: 20l / 200l/ 1000l
