

CroXX

protectionN

“Ready-to-use” DMPP-solution for stabilization of Slurry and Digestates.

CroXX protectionN delays the conversion of ammonium (NH_4^+) to nitrate (NO_3^-) significantly by inhibiting Nitrosomonas activity. Therefore, Nitrogen will remain available as NH_4^+ to plants for up to 14 weeks. Leaching losses of NO_3^- and gaseous losses of N_2O are largely reduced whereby in consequence Nitrogen Use Efficiency is increased.

Special formula for liquid organic fertilizers.

Content (% w/w)

5.3 DMPP

Bulk density (kg/l): 1.05 / pH: 3.0

CE certified

ProtectionN

Benefits

- ✓ Longer NH_4 in the soil
- ✓ Active ingredient 3.4 DMPP
- ✓ More N for the plant
- ✓ Less N losses though leaching (NO_3^-) and volatilization (N_2O)
- ✓ Higher P- and Trace Element Uptake through the action of DMPP

Packaging: 20l / 200l/ 1000l
